

# WOW LOGISTICS

## TECHNOLOGY SOLUTIONS

### A Comprehensive System Designed from Experience

Warehouse management is the foundation of WOW Logistics' business, making us experts at efficient operations. Over the last decade, we used that expertise to build a technology platform derived from practical knowledge of daily warehouse operations and refined our systems using feedback from our warehouse teams who use it every day. Our experience-based design has functionality requiring no costly customization before implementation. Our technology solutions can be deployed within your infrastructure, even if WOW Logistics doesn't operate your facility.

The platform includes our **Warehouse Management System (WMS)** at its base. Our **Warehouse Execution System (WES)** provides enhanced management capabilities, and our **Supply Chain Control Hub (SCCH)** creates one centralized system that brings visibility to key performance indicators (KPIs), contracts, change management, and costs across an entire warehouse infrastructure.

## WMS

- Manages inventory transactions accurately in real-time
- Streamlines inventory flow and operational consistency
- Integrates seamlessly with Enterprise Resource Planning (ERP) systems streamlining the order process
- Advanced features for lot control, variable weight product management, and cycle counting
- Prioritizes work based on the warehouse's appointment calendar

## WES

- Contactless driver check-in capabilities
- Labor management module to drive optimal resource levels
- Library of proven standard operating procedures (SOPs)
- Integrates damage, claims, and safety incident reporting
- Incorporates trailer inspections and equipment maintenance into the work process

## SCCH

- Connects WMS and WES systems across a warehouse network creating one centralized control hub
- Assists with centralized management of vendor relationships and scope
- Brings network-wide visibility to key performance indicators (KPIs), contracts, change management, and costs
- Provides the ability to compare KPIs and other metrics across different warehouse locations
- Facilitates and documents the approval process for scope changes or unplanned expenses
